

Supplementary Figure-2 Loessner

Supplementary Fig. 2. Two color flow cytometry of *S. typhimurium* expressing GFP. A) A threshold value (gray shaded area) and a gate were set in the orange/green acquisition plot for detection of GFP-expressing *S. typhimurium* in the lysate of infected J774A.1 macrophages after incubation of cells for 3 hrs with 400 mM L-arabinose. B) Histograms of bacteria from lysates of infected J774A.1 cells incubated with different concentrations (mM) of L-arabinose as indicated by numbers.
